Block Machine Table Plates

ConSpare have introduced a new generation of block machine table plate manufactured from exceptionally abrasion resistant ExtraChrome hardweld steel in a distinctive new wave pattern which we have christened 'Snake'. ExtraChrome~Snake table plates are engineered to offer longer service life for less downtime and better plant efficiency.

The Snake wave pattern prevents abrasive particles from becoming trapped between straight weld runs found in traditional hard-weld steels, helping to minimise wear during pallet movement. ExtraChrome~Snake table plates are available to suit most common block machines. Non-standard plates are manufactured to client specification.

64 – 66 Rockwell hardness

Unique 'Snake' hard weld pattern

Long life cost effective performance

Less maintenance downtime

Minimal intervention for reduced safety risk

Protect your investment

Table plates play an important role in the successful operation of a block machine. They are subject to many forms of wear including abrasion, erosion and impact, all of which are exacerbated by pressure. Premature failure often leads to pallet damage, whilst replacement is difficult, disruptive and causes safety issues. On the basis that prevention is better than cure, ExtraChrome~Snake table plates offer a safe, cost effective and efficient alternative to improve block plant operation.
