

Less disruption, more production: ConeFlex

The Challenge: A concrete discharge chute under the mixer at block producer, Bromfield Sand & Gravel, was constantly blocking, disrupting production. Their dry stiff mix caused severe build up, which could only be prevented by manual cleaning every hour.

Our Solution: ConeFlex abrasion-resistant conical chute liner

Key Features: Low-friction non-stick Hawiflex® PU provides an easy to clean surface and extended wear life

Improvement: Constant build up and regular blockage completely eradicated
6.5 years trouble-free service life. Still operational. No adjustments required

Benefits:

- Productivity** - less disruption, more production
- Safety** - light weight, safer to install and maintain
- Cleaning** - saves hours of wasted time every week
- Operator friendly** - no more struggling to clean an inaccessible chute

“The discharge chute used to be a major headache. No matter what we did, it constantly blocked up. Since installing ConeFlex almost six and a half years ago, it hasn’t needed any adjustment and we’ve not had a single blockage. Wash down at the end of the shift also only takes a few minutes. I can’t believe how effective it is. It was also cheaper than the steel alternative!”

Wayne Clent, Works Manager
