Make it better.

## DataSheet

# Matrox Polyethylene

Matrox Ultra High Molecular Weight Polyethylene (UHMWPE) liners solve raw material flow problems. Exceptionally low surface friction helps keep even the most stubborn raw materials flowing in bins, chutes, hoppers and feeders. Matrox Premium is the most advanced grade in our range and has been proven time and again to perform where other polyethylene's fail.

Lubricating additives produce a Teflon like finish for the lowest coefficient of friction on the market. Lower friction reduces the effects of abrasion for significantly longer wear life. Matrox also offers UV stabilisation and high levels of abrasion, impact, chemical and oil resistance, making it a durable, cost effective choice.

**High performance flow promotion**

**Exceptionally low surface friction**

**Excellent wear and impact resistance**

**UV resistant**

**Range of sizes & thicknesses**

**Easy to handle and install**

Matrox is light-weight, easy to handle and simple to cut, form and fix - installation is simple. Many clients opt to install Matrox with self tapping csk screws and edge capping. For large scale or more challenging applications we offer a range of specialist fixings which mount beneath the liner surface to avoid impeding product flow and protect bolt heads.

We stock 2m x 1m and 3m x 1.25m sheets in a range of thicknesses. Other sizes & specialist grades are available on request. We also stock a range of competitively priced PE1000 liners for less demanding applications.

Ideal for bins, chutes,  
hoppers & feeders
