TruckFlex Charge Chute

TruckFlex chutes solve the long standing problem of wear and tear on loading chutes caused by truckmixers. The revolutionary design combines two specially developed forms of Hawiflex® synthetic rubber into a single piece seamless chute. TruckFlex solves the most common causes of failure as, for the first time, each layer performs different functions to improve service life.

The outer layer is formulated to offer unparalleled tear resistance and an ultra low friction surface finish to reduce the risk of snagging and ripping, even with the most troublesome trucks. A highly wear resistant inner layer combats concrete abrasion and offers market leading flexibility to reduce resistance as it moves into the truck. TruckFlex chutes are site proven to deliver cost effective operation and minimise the high cost of replacement.

Patented dual-layer design

Exceptional flexibility

Maximum tear resistance

High visibility with wear indicator

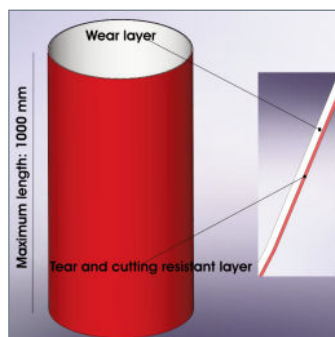

40% lighter than standard Hx chute

Oil, chemical and UV resistant

TruckFlex chutes are 6mm thick, making them up to 40% lighter than many traditional chutes for safer, simpler installation. High stability stretch resistance helps alleviate blockage problems for more reliable truck loading. High visibility colouring ensures better truck positioning and the bi-colour design acts as a wear indicator. TruckFlex is available ex-stock in 500mm (20") diameter by 610, 800 or 1000mm lengths and 560mm (22") dia by 1000mm long from sole agent ConSpare.

Exceptional flexibility

Dual-layer technology

Maximum tear resistance
