

A large blue industrial machine, likely a concrete production board, is shown in the background. It has a complex frame with vertical supports and a horizontal beam. A motor or actuator is visible at the top. The machine is on a light-colored floor.

boards!**

Crust Cracker

The Power of Board Cleaning

New and most effective system

Inline cleaning and reconditioning system for all production boards:
Steel, plastic and wood.

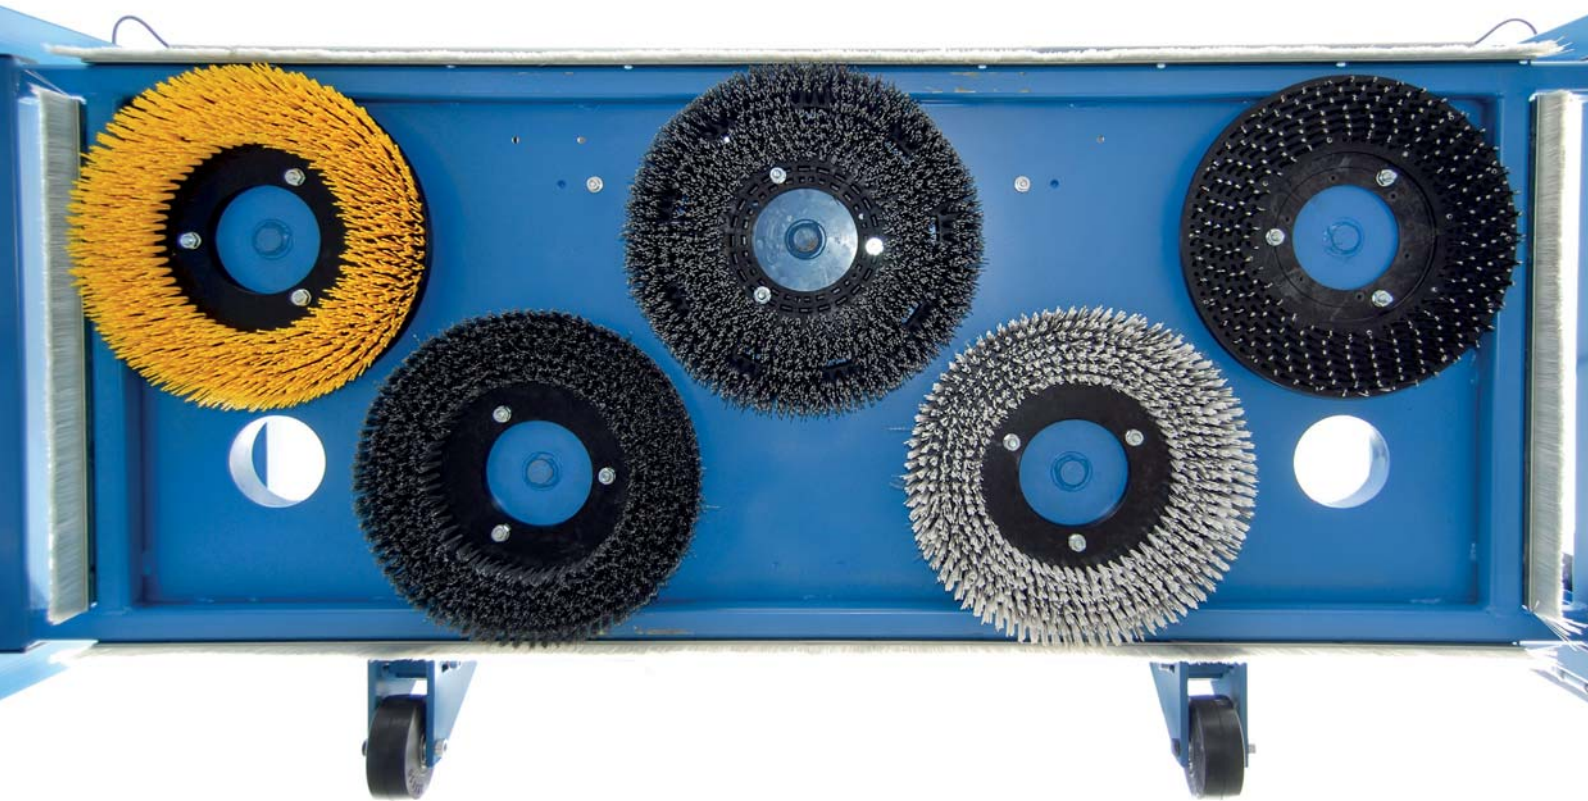

Crust Cracker
The Power of Board Cleaning

Inline system

The auto controlled system fits existing production lines.

Using 5 overlapping plate brushes that reach every inch of board surface, our CrustCracker® provides the highest cleaning performance of any inline system. Depending on operating conditions and the conditions of the production boards the brushes are fitted with the most suitable bristle type: from super aggressive nylon grit to the only mildly abrasive polypropylene.

Embedded concrete, grime and rust are eliminated over a short period of time while new build-up is effectively prevented.

The CrustCracker® operates as a self contained, auto controlled system and will fit any existing production line.
