

Walter washout systems are the UK's market leader. ConSpare provides the best back-up and now offers the most comprehensive service scheme available to the concrete industry to keep Walter systems operating at optimum performance and safety.

The ConSpare scheme offers professional servicing carried out by Walter trained engineers to the manufacturers exacting standards. We use specialist tooling and supply components which are not available from any other source. Our engineers are highly experienced in site work and have all necessary safety certification and documentation.

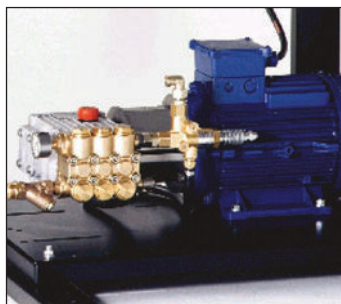

#### Key elements of service:

- Assess current condition of equipment
- Inspect pump and replace oil
- Conduct safety checks
- Remove, clean and inspect RD3 cleaning heads
- Inspect high pressure lines, connectors and valves
- Clean dirt trap
- Check electrical control panel and operating hours
- Refresher training for site operatives
- Provide full service documentation

Our focus is on keeping cost to a minimum. With more systems in the field than any other manufacturer, we are able to co-ordinate visits to keep cost down. We operate with a standard flat rate service charge, irrespective of location. We always obtain approval to fit spare parts before repairs are conducted so you know what the service cost will be.

A fully stocked service van, which includes high pressure hose making equipment, carries virtually all components. Repairs can be carried out immediately to avoid return visits. Walter systems are cleverly designed to keep spare parts costs to a minimum. All equipment is available in component form and our emphasis is to repair rather than replace. Please contact our Engineering Department for further information or to book your service.
