Make it better.

## Twinshaft refurb made simple with ConSpare

Twinshaft mixers are commonplace throughout the UK, yet maintaining them is often considered an arduous task for maintenance teams. This is why in 2023, ConSpare launched a Supply & Fit service for replacement twinshaft components via our approved subcontractor, Impact Engineering.

### Twinshaft mixer - full refurbishment required.

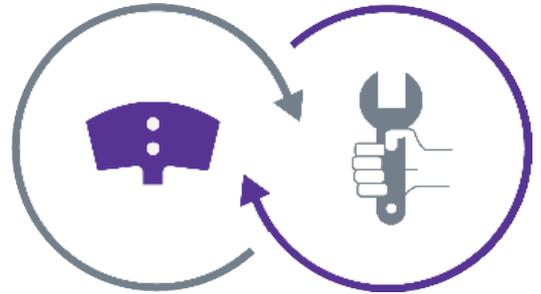

One such client was a busy readymix plant producing high-strength concrete. Their twinshaft mixer would regularly require replacement parts due to impact and wear during the mixing process. The work was undertaken by two members of the maintenance team and normally took a week each time.

Although regularly maintained, the twinshaft mixer had not been fully refurbished in 10 years and was long overdue. With limited in-house resource to undertake the project, the maintenance team were searching for an alternative. Having seen ConSpare's work with Julian Wilkins and Impact Engineering on LinkedIn, they contacted us for help.

### The process. Full mixer refurbishment in less than 5 days.

Following a conversation with our Spare Parts division, a site visit was arranged for the mixer to be assessed, and parts were then ordered. A date was scheduled to suit client requirements, and the parts were sent directly from our UK warehouse to site, ready for Impact Engineering to get started. The full refurb was completed in just four and a half days and consisted of replacing:

- 14 mixer blades and arms
- Lining tiles and end plates
- Both shafts, shaft components, bearings and seals

### One year later - everything performing well.

"The twinshaft refurb was our first major job of 2025, and it started our year off perfectly. Everyone at ConSpare was very accommodating of our requirements, and Julian's workmanship is top-notch; everything was completed safely and in great time.

All parts fit first time with no problems, and a year later they are still going strong. We've only had to adjust the paddles and replace the seals as part of our scheduled routine maintenance. The supply and fit offering from ConSpare made everything super simple. A highly recommended professional service." - **The Area Fitter**

Twinshaft parts & installation all under one order number.
