DataSheet

TrueCap Capacitance Switch

In our capacity as sole distributor for Monitor Technologies we supply a comprehensive range of level switches offering site proven reliability at highly competitive prices.

TrueCap RF capacitance level switches provide cost effective point level detection for virtually all bulk solid materials, liquids and slurries. The TrueCap offers a high degree of sensitivity, stability and durability. Radio frequency allows a superior sensitivity range enabling the user to quickly and simply adjust the unit to suit virtually any application. Special pro-active driven shield technology helps eliminate false signals caused by product build-up on the probe and an integral delay timer ensures stable operation in applications where material splashes onto the probe.

Superior sensitivity

Driven shield technology for immunity to probe build-up

Fail-safe design with relay output and adjustable time delay

Rugged cast alloy housing

LED operation indicator

Rigid or flexible extensions

Two year warranty

Monitor capacitance level switches generate an output signal when the material in storage vessels reaches a predetermined high, low or intermediate level. They are suitable for use in silos, hoppers, bins or tanks, containing virtually any free-flowing solid material, liquid or slurry.

A comprehensive range of tubular extensions to 3.6 metres long, or flexible extensions to 15 metres long are available to maximise the number of TrueCap applications. For full specification please see Bulletin 413 on our website and refer to model MK-2e.
